Mark as done

We are going to create a simple page that displays your 5 favorite restaurants in your favorite city. You should use all the tags we used to create our travel site.

Easy Challenge

[Reference for challenge](#)

Find some tags using the reference above to style some of the text on the page. This will help you get familiar with reading documentation. Learning on your own is a big part of being a successful developer.

Medium Challenge

Make one of your favorite places to eat your own kitchen. Create another HTML page for your kitchen (e.g. my_kitchen.html). Make sure you link to your new page from the main page. Also make sure you can get back to your main page from your new page. This page should **NOT** open in a new window.

Link to an internal page example

```
<a href="my_kitchen.html">My Kitchen</a>
```

Hard Challenge

[Reference for challenge](#)

Add a contact form to your page. This form does not need to function. Only worry about getting in to display on your page. Collect the users name, email, and comment.

Submit a link to your GitHub repository or upload the page.
